## ICD-10 fix and supplementary codes update

February 2022

A bug fix has been implemented to allow the extraction of ICD-10 underlying codes using the NCIS query design screen.

A number of updates have also been made to the supplementary codes that support coronial data in the NCIS, including:

- Geocoding of incident, residential and death addresses for the October to December 2021 quarter
- Preliminary ICD-10 codes for Australian deaths registered in 2020
- ICD-10AM codes for New Zealand deaths registered in 2019
- Additional codes for work related deaths that occurred in 2020.

System notification #1	
Title	Bug fix – ICD-10 underlying codes
Description	Fix for the extraction of ICD-10 underlying codes using the NCIS query design screen
Why did we make the change?	On the NCIS query design results screen (tab 6), when the <i>ICD-10 (Underlying)</i> checkbox was selected, it incorrectly activated the <i>ICD-10 (All)</i> checkbox.  Users were unable to return only underlying ICD-10 codes.
Change result	The <i>ICD-10 (Underlying)</i> checkbox can now be selected without activating the <i>ICD-10 (All)</i> checkbox.  
Further information	Nil

## National Coronial Information System

System notification #2	
Title	Incident, residential and death address geocoding updates
Description	<p>A quarterly update of geocoded information for incident, residential and death addresses have been completed.</p> <p>The October to December 2021 quarter geocoding update was uploaded to NCIS at the start of January 2022.</p>
Why did we make the change?	Geocoded data for residential, incident and death addresses is updated quarterly to ensure any new addresses have boundary tags assigned and to account for any adjustments to existing address fields
Change result	<p>Geocoding is now available for:</p> <ul style="list-style-type: none"> <li>• an additional 6,733 residential addresses</li> <li>• an additional 5,215 incident addresses</li> <li>• an additional 8,055 death addresses</li> </ul>
Further information	See the <a href="#">explanatory notes</a> section of the NCIS website for further information about the geocoding process

System notification #3	
Title	Preliminary ICD-10 codes for Australian deaths
Description	ICD-10 codes for Australian deaths registered in 2020 have been added to the NCIS
Why did we make the change?	The Australian Bureau of Statistics (ABS) recently released their preliminary ICD-10 codes for Australian deaths registered in 2020
Change result	More than 20,100 Australian deaths registered in 2020 were updated on the NCIS with preliminary ICD-10 codes
Further information	<p>Revised and final ICD-10 codes for the 2020 dataset are expected to be released by the ABS over the next few years and will be updated on the NCIS accordingly.</p> <p>See the <a href="#">explanatory notes</a> section of the NCIS website for further information about ICD-10 codes</p>

System notification #4	
Title	ICD-10AM codes for New Zealand deaths
Description	ICD-10AM codes for New Zealand deaths registered in 2019 have been added to the NCIS
Why did we make the change?	The New Zealand Ministry of Health recently released the ICD-10AM codes for New Zealand deaths registered in 2019
Change result	More than 1,990 New Zealand deaths registered in 2019 were updated on the NCIS with ICD-10AM codes
Further information	New Zealand applies ICD10-AM codes to causes of death, while Australia uses ICD10 codes.

**System notification #4**

	See the <a href="#">explanatory notes</a> section of the NCIS website for further information about ICD-10AM codes

**System notification #5**

Title	Additional codes for work related deaths
Description	Occupation, industry, and injury type (TOOCS 3.0) codes for work related deaths that occurred in 2020 have been added to the NCIS
Why did we make the change?	Safe Work Australia recently provided supplementary codes for upload to the NCIS for work related deaths in 2020
Change result	More than 220 deaths on the NCIS now have additional work related coding available.
Further information	<p>Only deaths considered by Safe Work Australia to be work related have these additional codes supplied.</p> <p>More information about TOOCS (type of occurrence classification system) can be accessed <a href="#">here</a></p>
